greener services
more value

WHY?

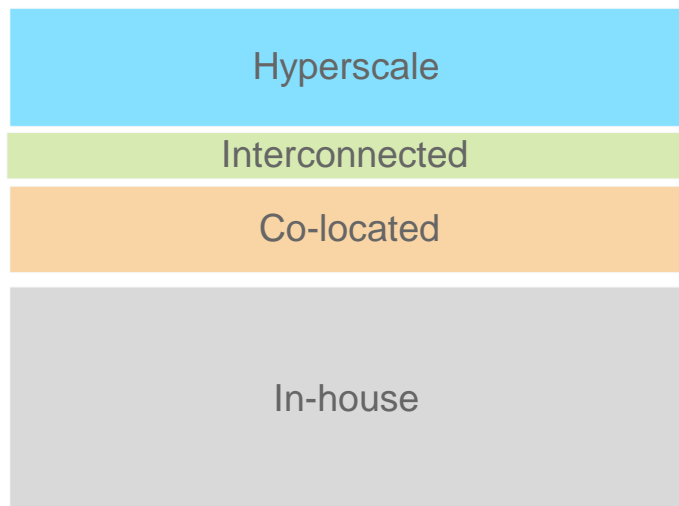

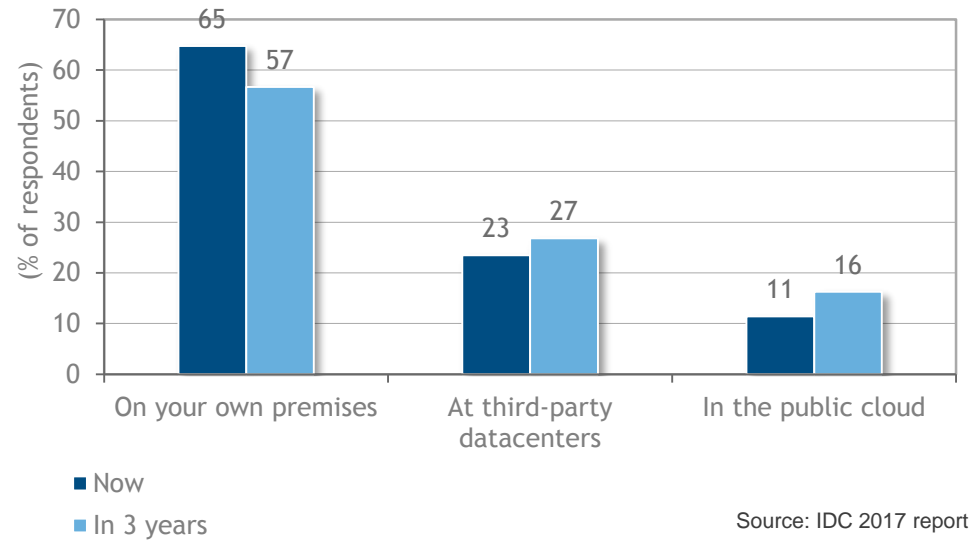

Driving the demand – home

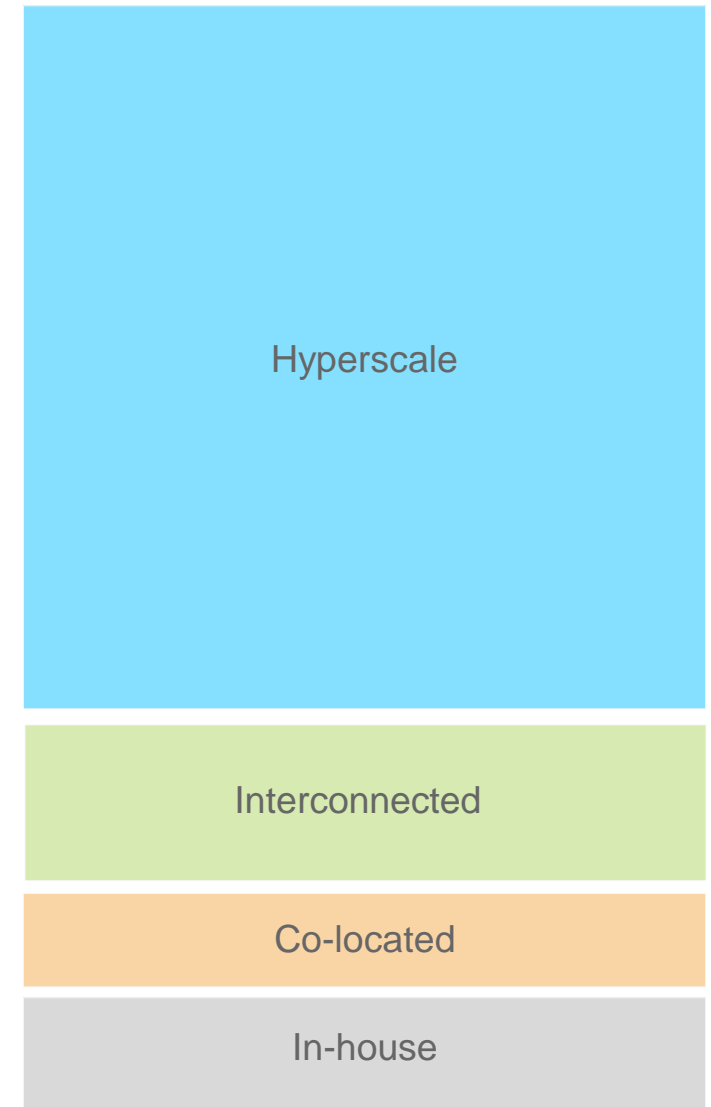

Driving the demand – work

Data centres of the future

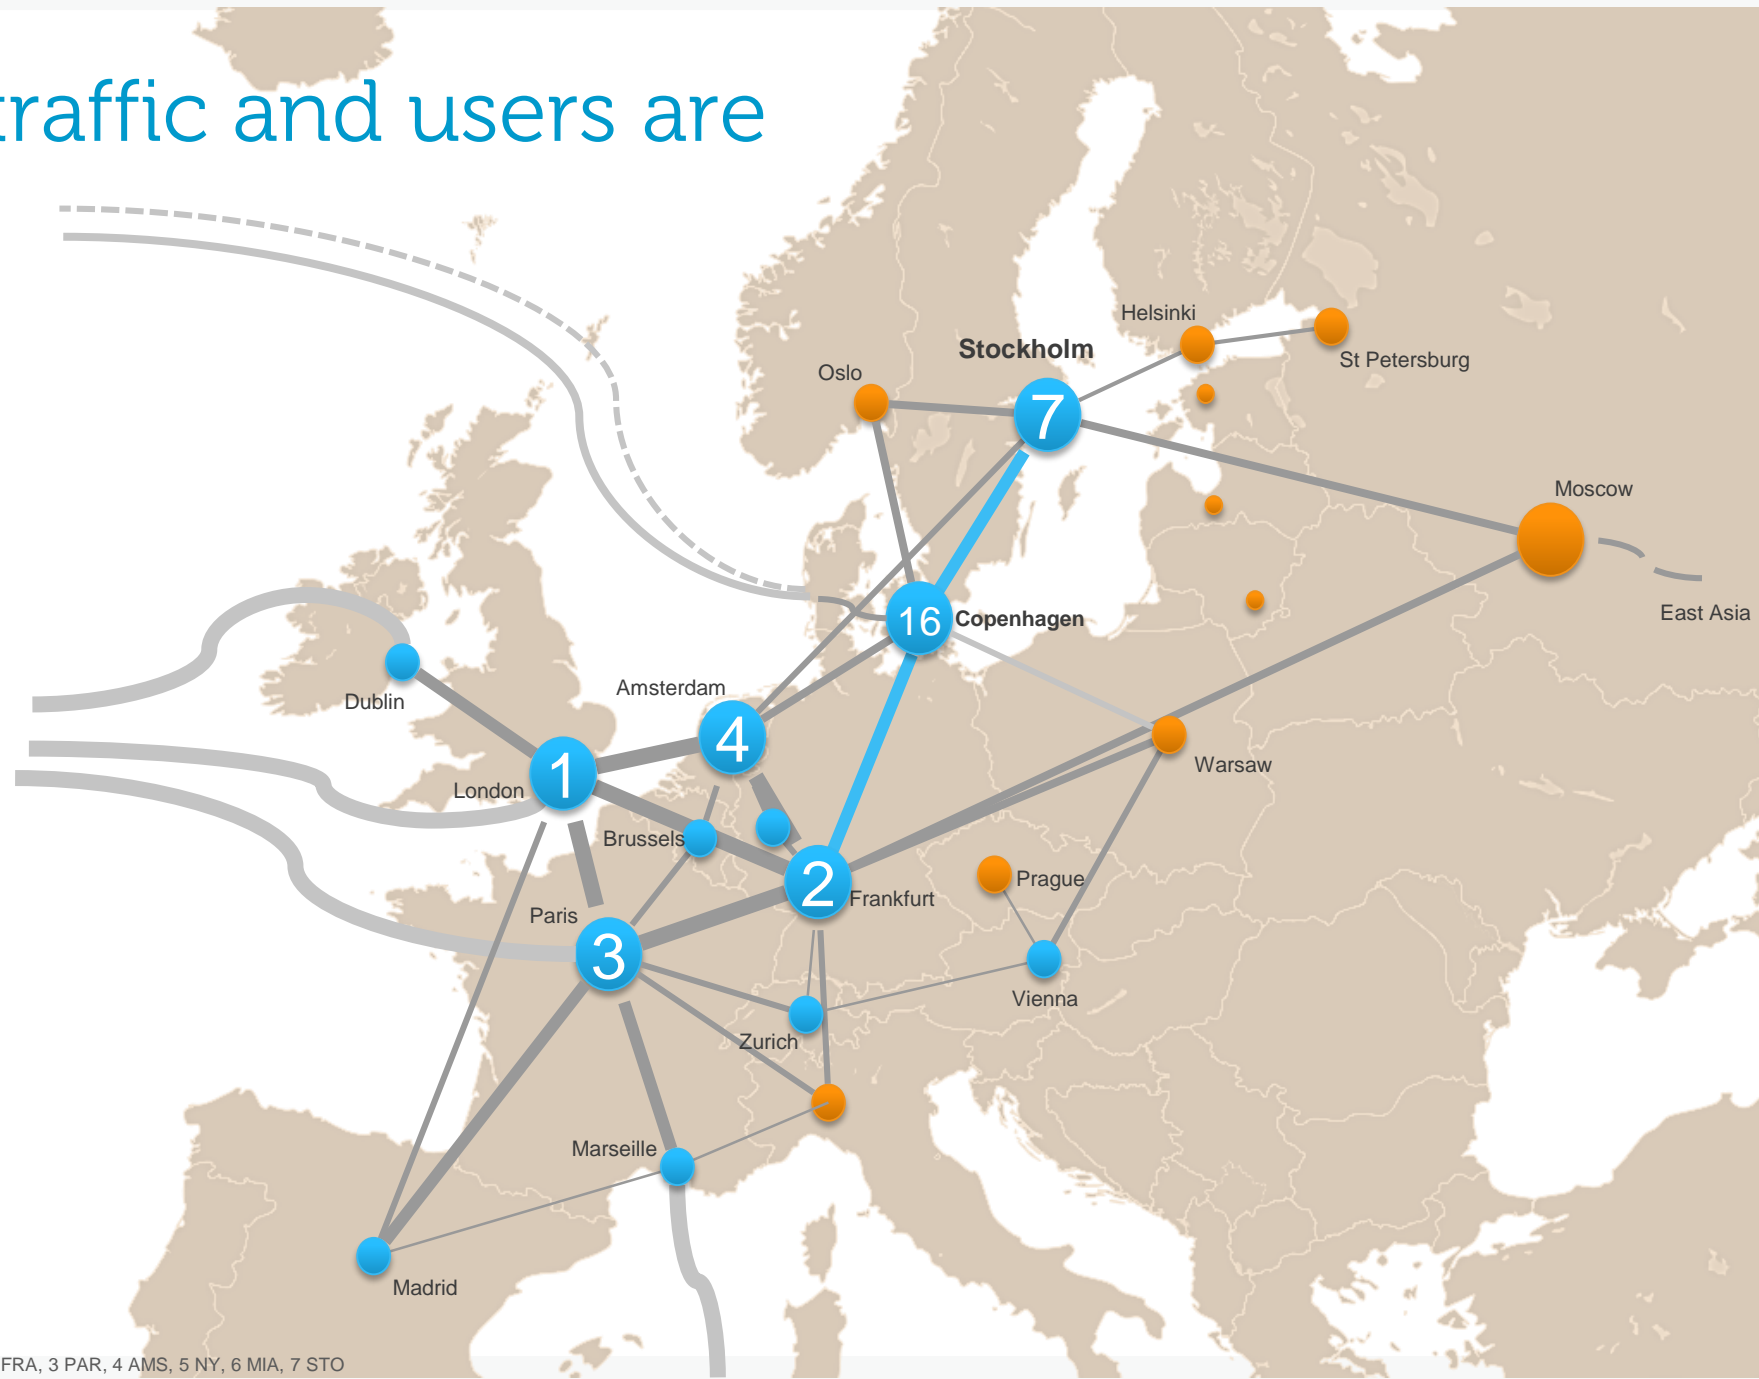

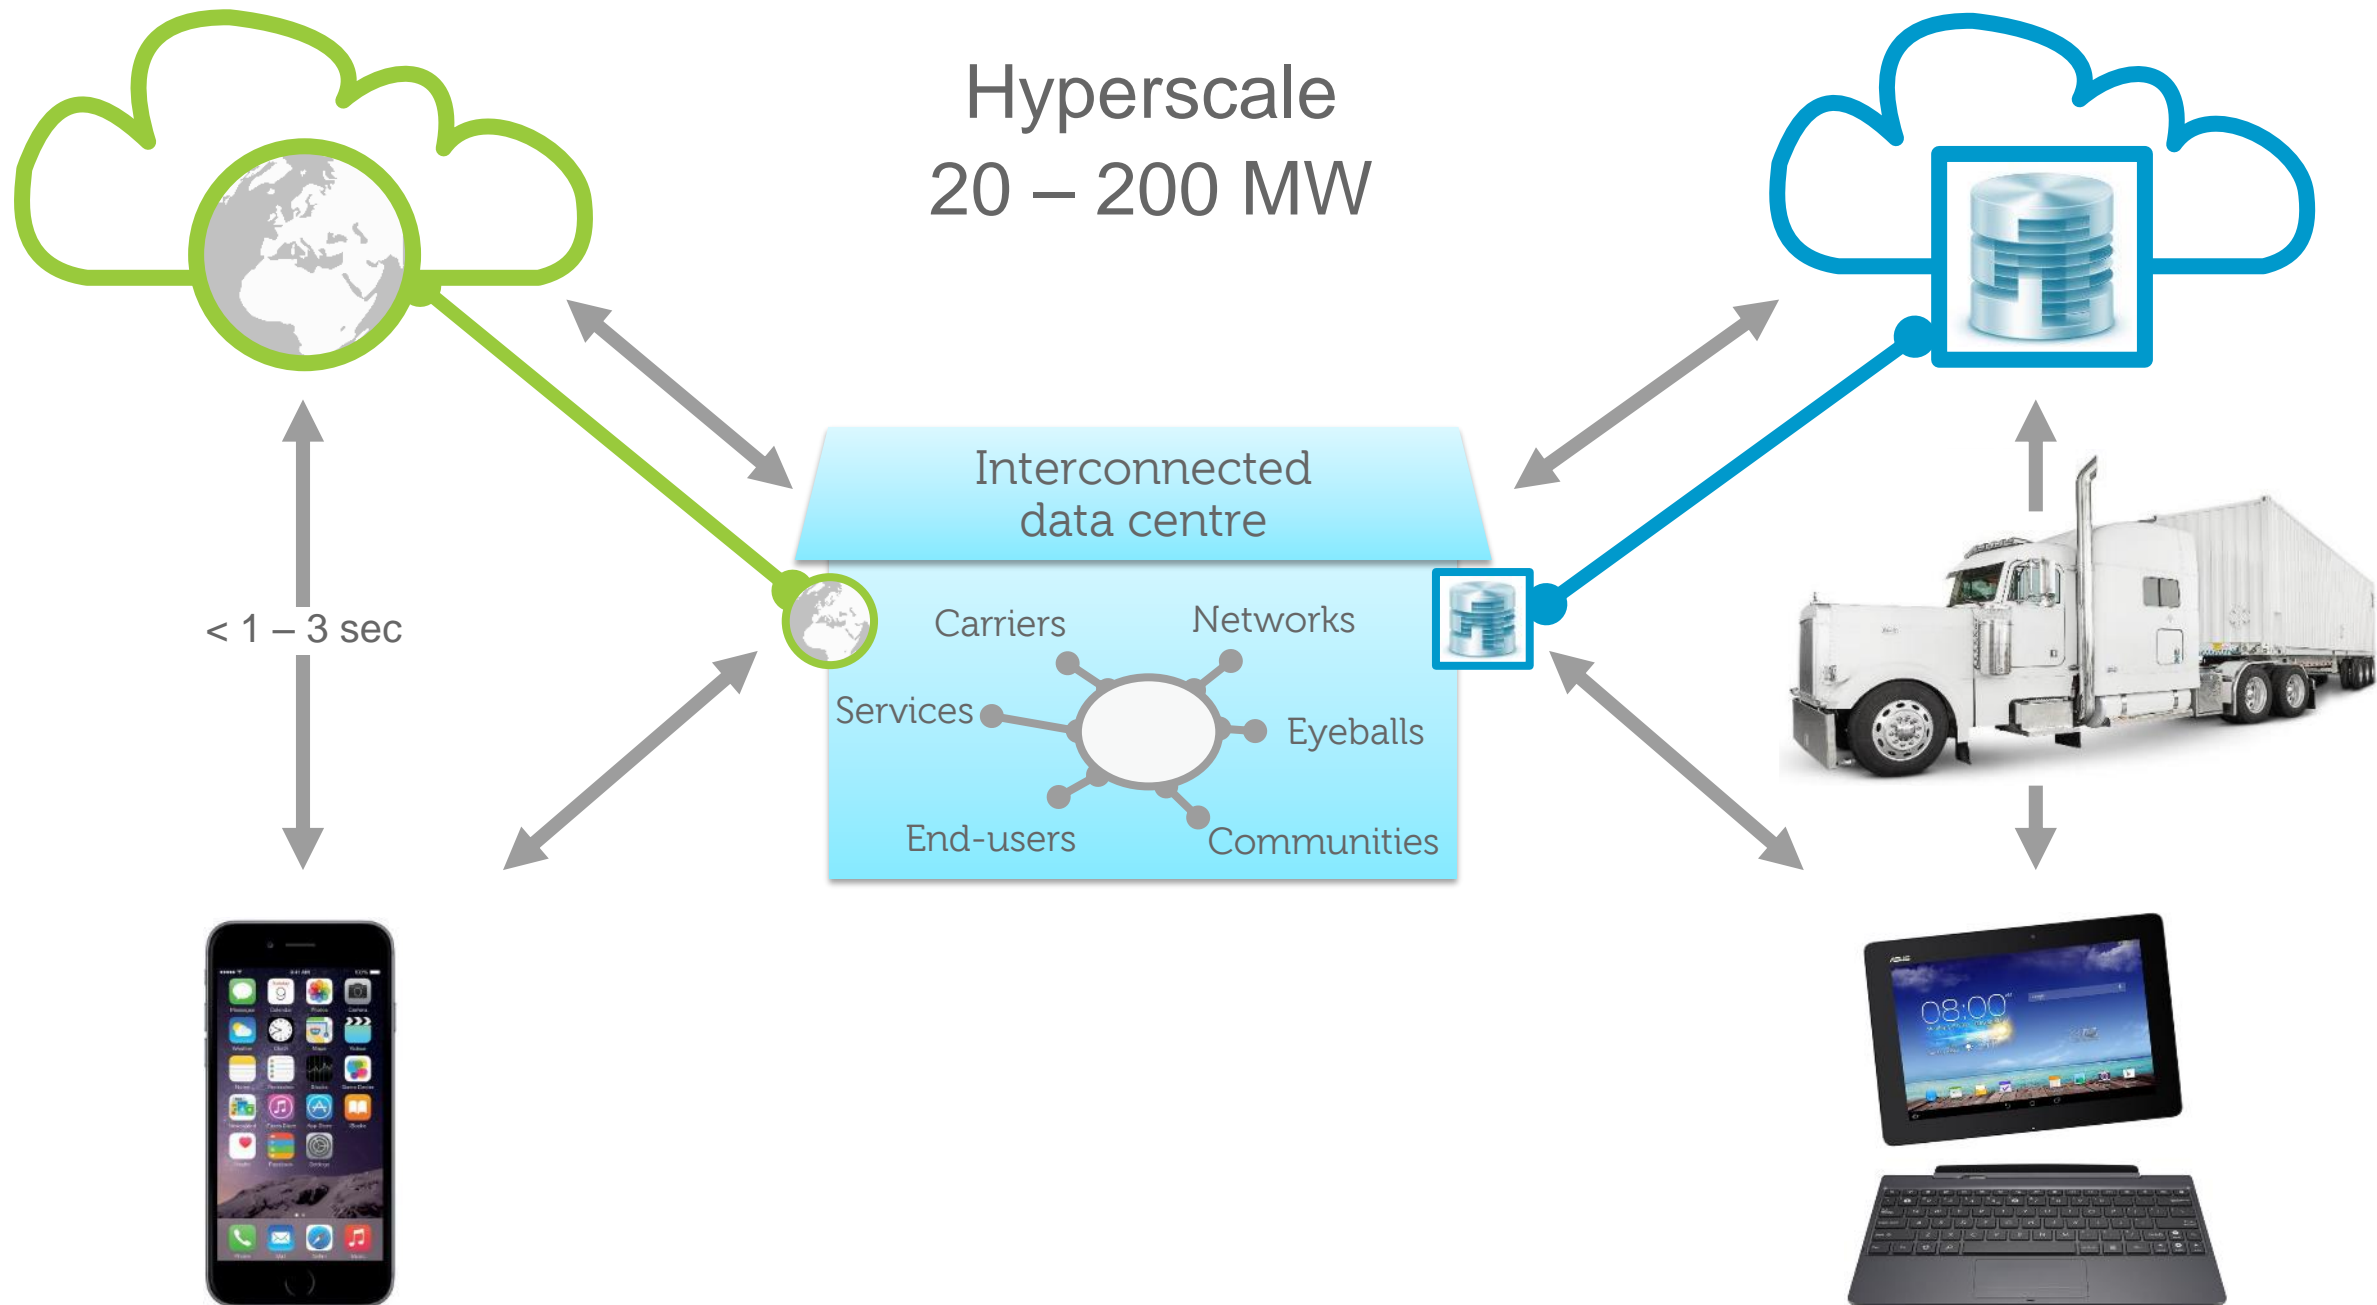

Workloads

Connectivity and Value

Be where the traffic and users are

Reliable and Green

More than the data centre(s)

IT Opportunities

- Application design
- Server Management

Airflow Management Strategies

- Hot Aisle/Cold Aisle Layout
- Containment/Enclosures

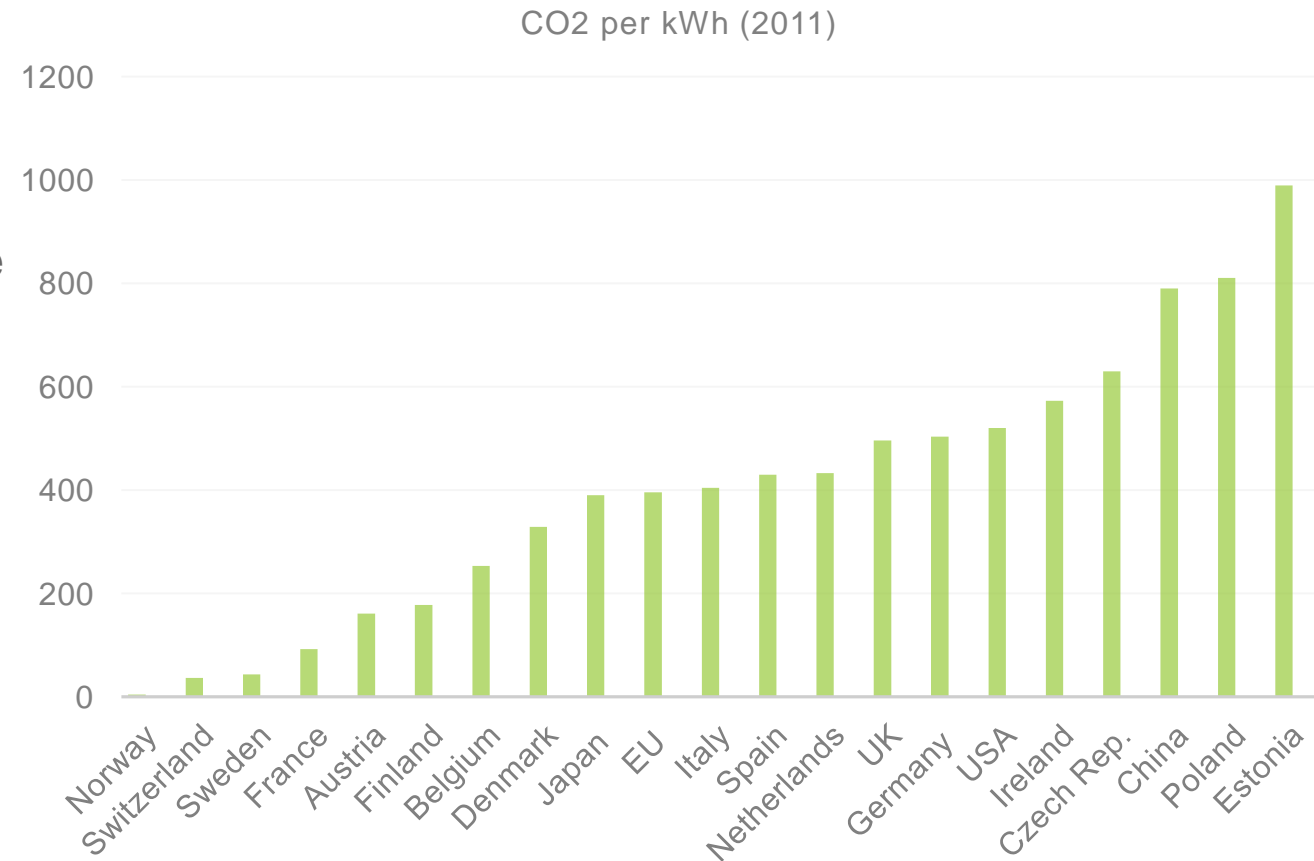

HVAC Adjustments

- Server Inlet Temperature and Humidity Adjustments
- Air- and/or Water-side Economizers

In a co-located data centre the most demanding customers sets the standard

Sustainable data centres not only about PUE

- Where does the power come from?
- Can excess heat be re-used?
- How sustainable is the IT-environment?
- Scale, adapt and combine your data centre capacity as needed
 - More difficult than ever to predict future IT-capacity requirements

Interxion Stockholm – our data centre campus

- Campus with extreme and sustainable growth capacity
 - Extensive re-use of excess heat
- Energy efficient and sustainable cooling
- Access to cost-efficient, green and reliable power
- Connectivity access and options on site
 - Carriers, traffic, peering, content, eyeballs, IX presence
- Right location
 - Geography, GDP, eye-balls, highly connected
- Hybrid IT realisation
 - Direct access to cloud platforms
