Making the Business Case for Energy Efficiency in Data Centres

Lessons learned evaluating near 300 public sector data centres in Europe

Impact

>15 GWh

Per year of
electricity savings
were identified.

**Supported Pilots
in 3 countries,
and other
engagements in
4 more.**

Impacting over
300 data centres.

**Organised 12
events across
Europe.**

2 more to go in
Germany and UK.

300

professionals
trained, expecting
to reach 500 by
the end of the
project.

Helped shape
various European
policy initiatives

Lessons Learned

A person is rappelling down a dark, craggy rock face. The person is wearing a yellow shirt and dark pants, and is positioned in the upper center of the frame. The background is a dramatic sky at sunset or sunrise, with soft orange and pink clouds. In the lower part of the image, a body of water is visible, reflecting the light from the sky. The overall scene conveys a sense of adventure and challenge.

Challenges

- Maintenance Costs
- Maintaining availability
- Rightsizing new builds
- Procurement
- Insufficient Priority
- Technical landscape

Server Utilisation

Points affecting server utilisation

- Active – Active / clustering deployments
- Peak utilisation vs performance degradation
- Ensuring there is enough capacity in the system to cater for workload peaks
- Having the right server configuration for the workload

Points affecting hardware refresh

- Budget availability and accounting practices
- Misconception about environmental impact

The major impact areas

- Facility
 - Right-sizing DC capacity
 - Right-sizing availability/redundancy
- IT
 - Optimise hardware refresh
 - Increase utilisation
