

14th Workshop – Friday 9th February 2018
House of Commons

EURECA & Defra UnTy programme

Bob Crooks

Sustainable ICT lead Defra

Why we need UnlTy

Two different and incompatible ICT estates:

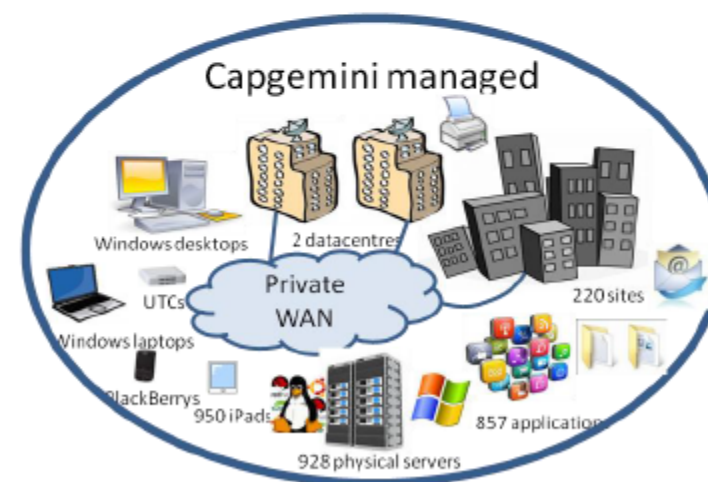

Costly – inefficient dual management and infrastructure

Hard to manage - multiple devices (e.g. laptops) to work across Defra

Duplication of effort - difficult to get field force working together

Slow, stifles innovation - current contracts work against agile change

Prevents collaboration - can't access data between estates

UnITy's Vision

One Defra

VFM

Reliable and friendly

Hosted sustainably

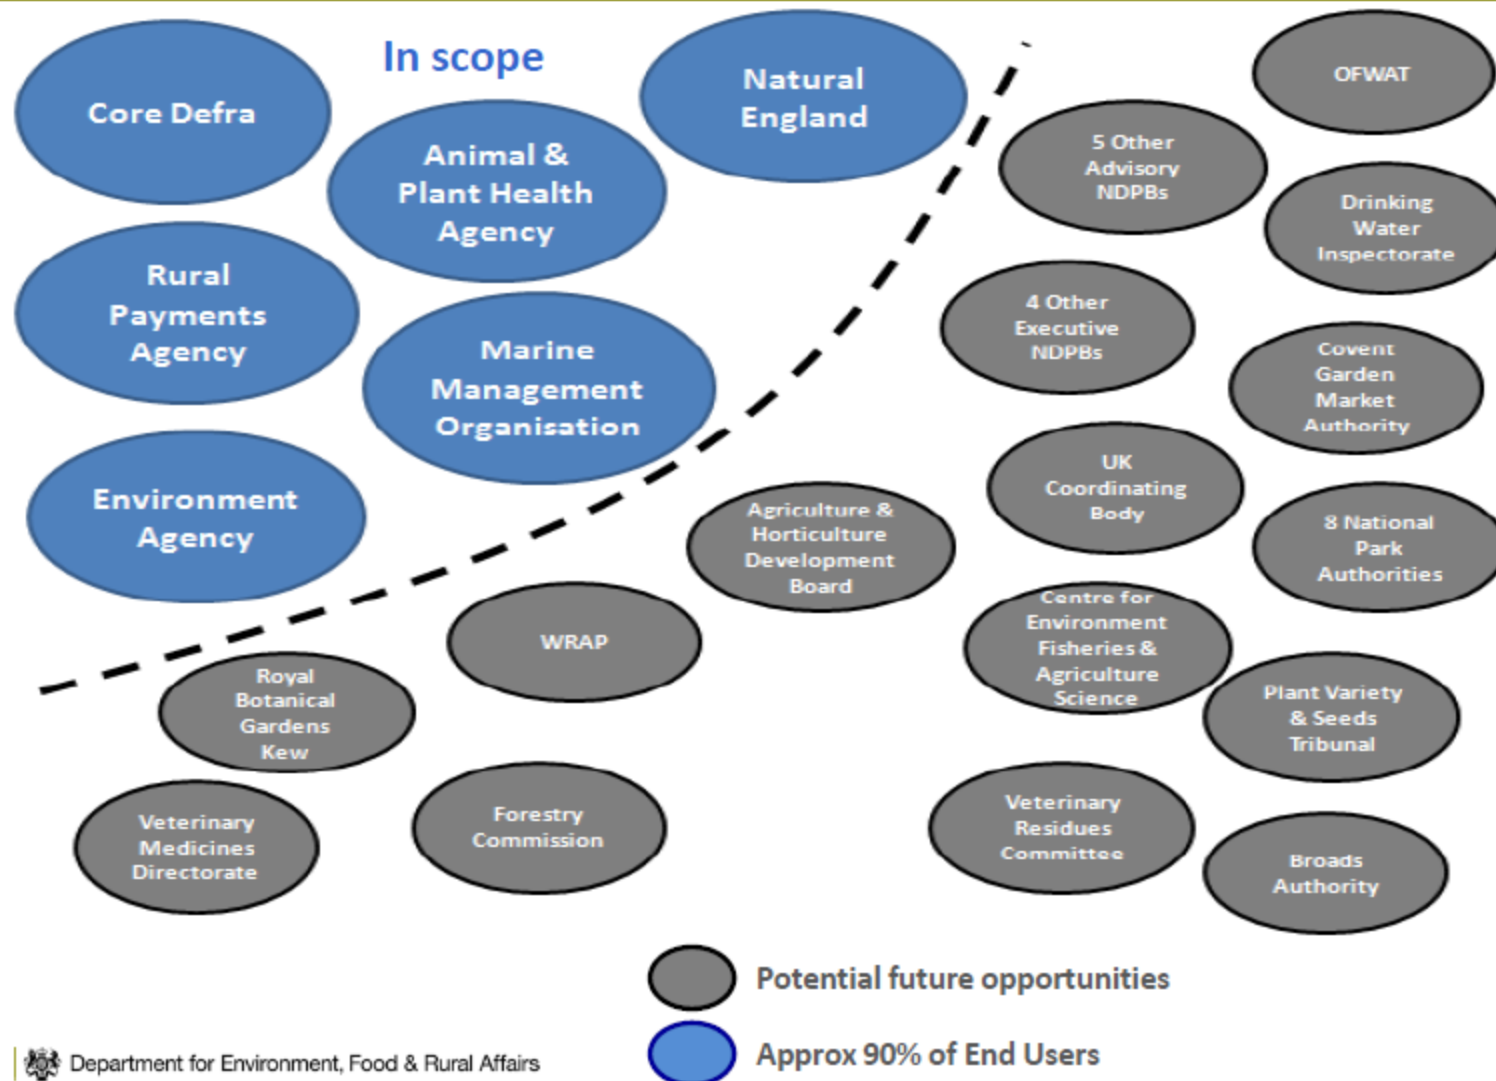

Connected

Manage suppliers well

UnlTy's scope across Defra

Focus of UnTy workstreams

Hosting & Applications Management

Ensuring continued support for legacy line of business applications via new hosting contracts.

End User Environment

Enabling current desktops and mobile devices to be replaced with more cost effective and flexible options

Service Management

Developing specialist capability that integrates services delivered by a multi-supplier environment.

Systems Integration & Platforms

Providing common, strategic platforms to improve collaboration and data sharing.

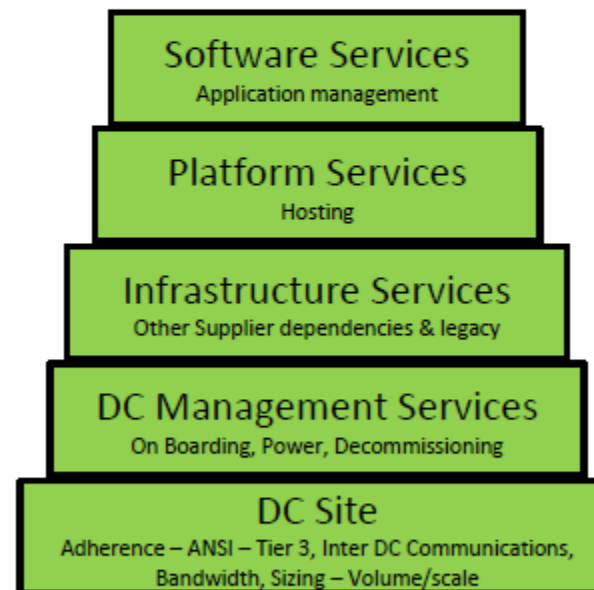

Connectivity

Enabling flexible and reliable connectivity through new, more cost effective services.

High Level Requirement Categories

The Hosting and Application Management procurement consists of five service categories. Requirements will be produced under each category.

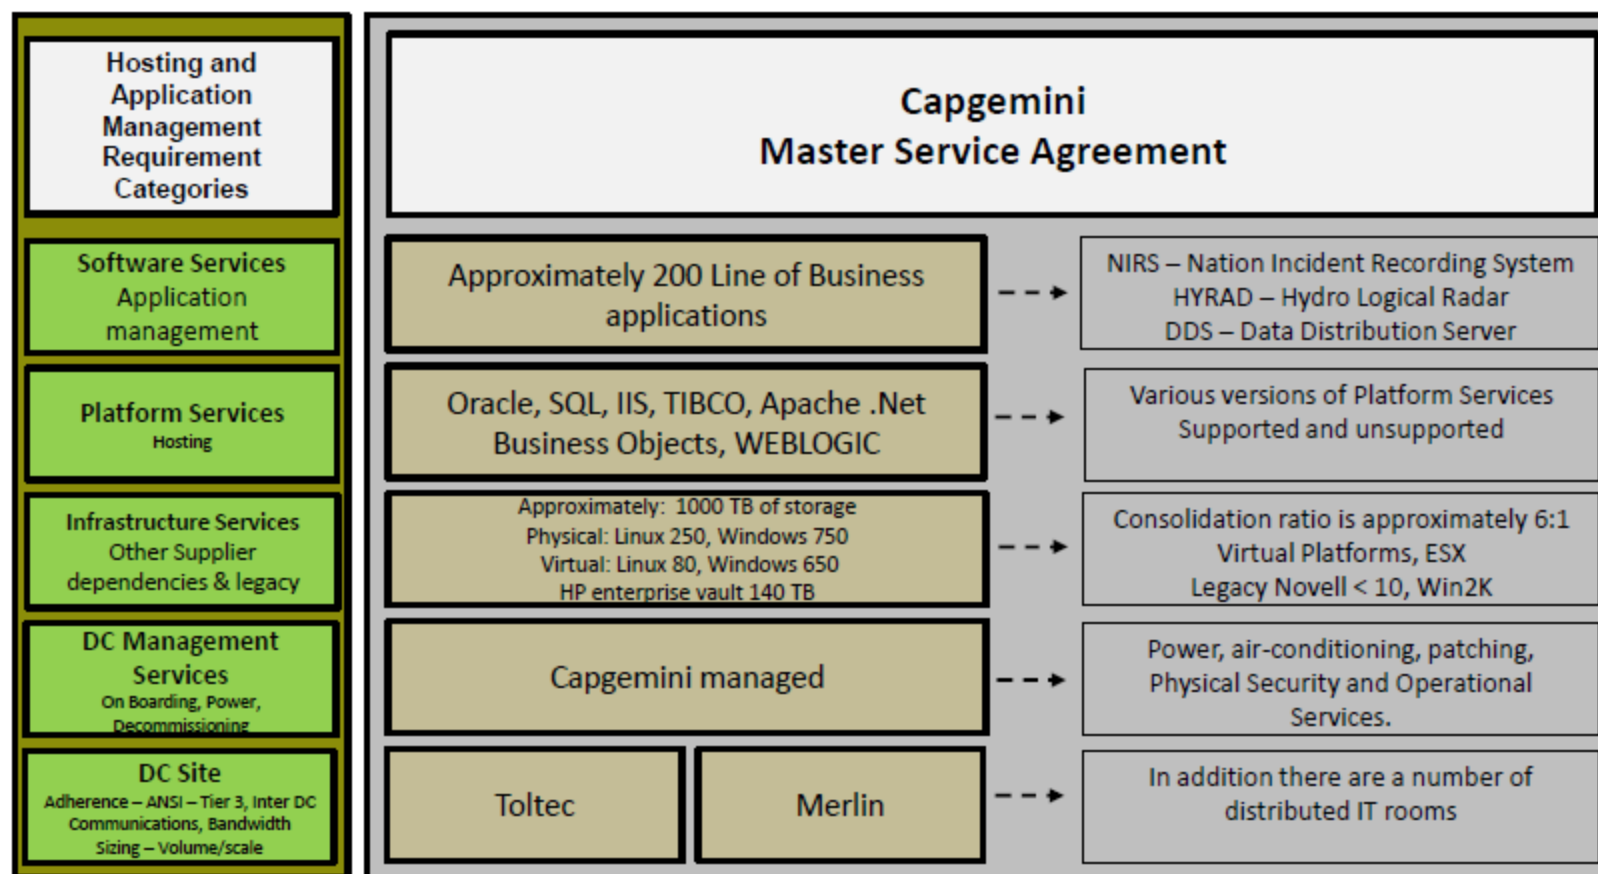

Requirements produced by Hosting & Application Management

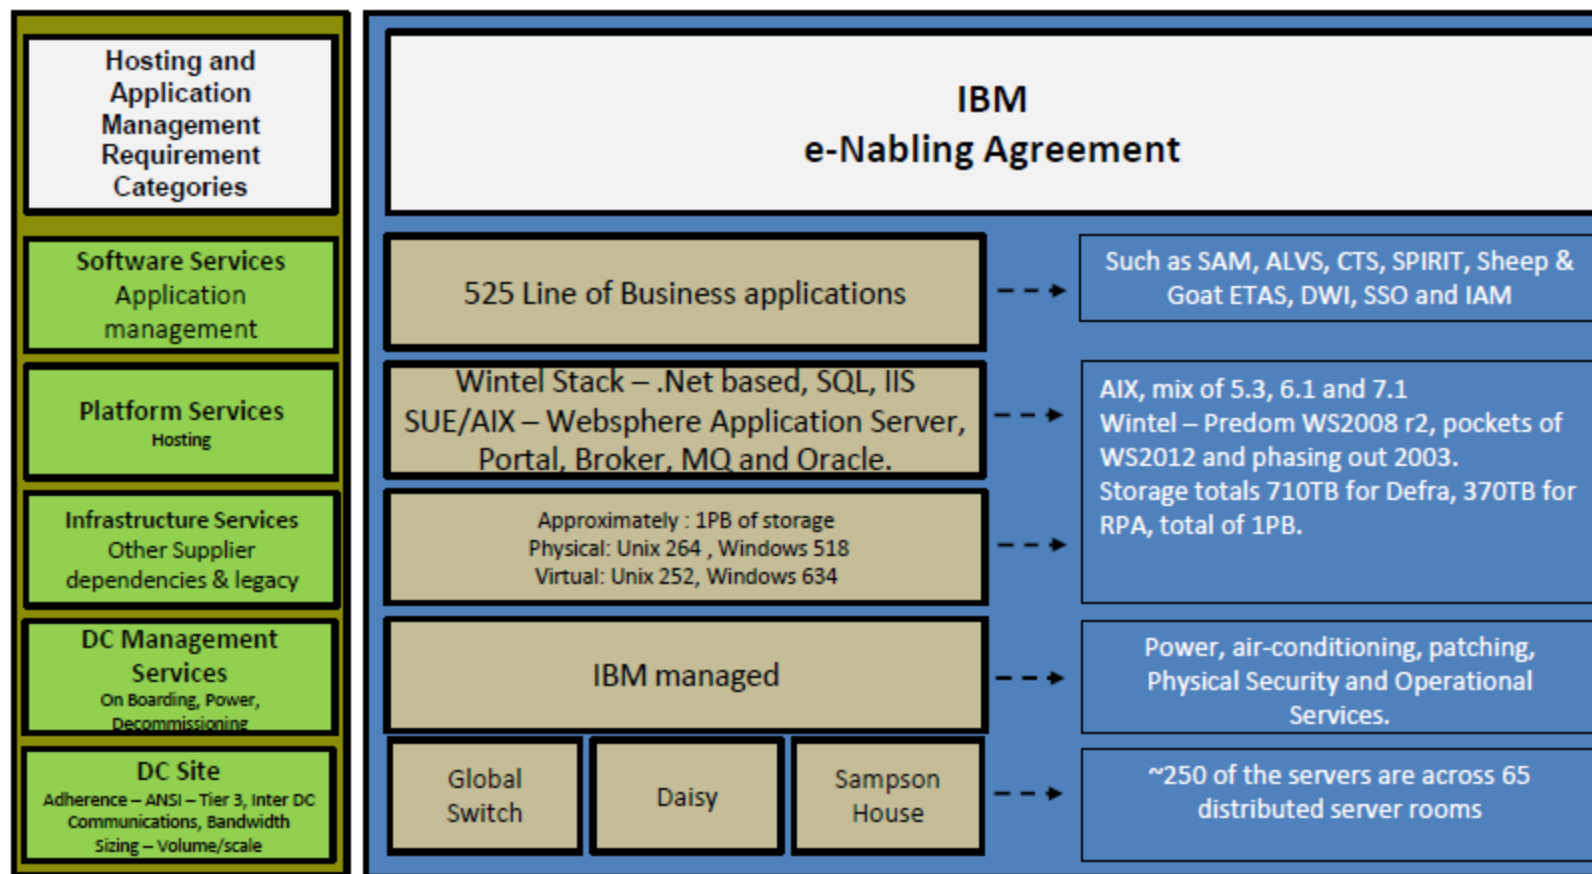

Current Mode of Operation (CMO)

- Existing Prime Contracts
 - Environment Agency, Capgemini Master Service Agreement.
 - Capgemini provides services to the Environment Agency(EA)
 - The EA also provides some application services to other organizations such as Defra, Scottish Environment Protection Agency and the Met Office.
 - The services are provided to around 10,500 users.
 - The existing service is for the end to end ICT delivery, from DC's to App
 - Defra, IBM e-Nabling Contract
 - IBM provides services to core Defra, the Rural Payments Agency, Natural England, the Marine Management Organization and the Animal and Plant Health Agency.
 - In total 10,000 users.
 - The existing service is for the end to end ICT delivery, from DC's to App
- UnITy will replace these existing prime contracts with a new disaggregated supply chain.

CMO Environment Agency

CMO Defra

Raising Sustainability Expectations

Sustainability is important to us - we already have:

- Participant status for all our data centres in the EU Code of Conduct for Energy Efficient Data Centers
- PUEs
 - Defra DC1 => 1.47
 - Defra DC2=> 1.58
 - EA DC1=> 1.2
 - EA DC2=> 1.8
- High levels of server utilisation
- Energy reporting

Way forward and expectations

- Sampson House lift and shift to Crown Hosting (ARK)
- Procure hosting service for other DCs using EU OJEU Negotiated proc
- Set PUE target of 1.5
- EURECA offered innovation in procurement to increase energy efficiency

Sample of Data provided to EURECA – EA

Make	Model	Version	Item	RAM amount	CPU Count	Core Count	Status	System Role	Additional Information	Site
Hewlett Packard	ProLiant	BL460c G6	Server	12288	1	2	Deployed	Linux Category C	SUSE Linux Enterprise Server 10 (x86_64) - Service Pack 3	UK-BSO-TOLTEC
Hewlett Packard	ProLiant	BL460c G6	Server	12288	1	2	Deployed	Linux Category C	SUSE Linux Enterprise Server 10 (x86_64) - Service Pack 3	UK-BSO-TOLTEC
Hewlett Packard	ProLiant	BL460c G6	Server	40960	1	2	Deployed	Linux Category C	SUSE Linux Enterprise Server 10 (x86_64) - Service Pack 3	UK-BSO-TOLTEC

Sample of Data provided by IBM – Defra

COMPUTERSYSTEM NAME	NUMBER OF CPUS	CPU SPEED	MEMORY SIZE	System Administrator or Owner	Model	Major Business Processes Supported or System Purpose	CI LOCATION
GB32QTE000DEF37	4	3,600,000,000	3,488,612,352	DEFRA WINTEL	eserver xSeries 346 - [884042Y]-	TIVOLI GATEWAY	AH LEEDS

PUE Reference points

- Average European PUE, based on the 300 or so odd data centres reported under the EU Code of Conduct scheme, is 1.7.
- In the US, federal data centres are not permitted a PUE higher than 1.5.
- Ark Crown Hosting PUE expected to be around 1.2.

EURECA assessment

What we should expect from the Industry...

Sampson House													
Sampson House (Baseline Scenario)													
Total Energy Consumption KWh per Month		Monthly IT Energy Consumption in KWh	% IT Power for Servers	% Utilisation	PUE	Avg. Power Consumption of Servers (Watts)	Number of Servers	Servers					
								Avg. Power Rating idle	Avg. Power Rating 100% utilised				
223781.72		141634.00	85	17.5%	1.6	239.7039264	688	190	474				
Sampson House (Calculator)													
% Change compared to baseline		Total Energy Consumption KWh per Month	Monthly IT Energy Consumption in KWh	% Utilisation	PUE	Avg. Power Consumption of Servers (Watts)	Number of Servers	Servers					
								Avg. Power Rating idle	Avg. Power Rating 100% utilised				
84%		35672.82	29727.35	60.0%	1.2	115.80	201	190	474				
Annual GWh savings: 2.26													
Annual Savings in £: 270,876.82													
Electricity cost (£) in KWh 0.12													
Reset										Upgrade	100	33	171
Global Switch													
Global Switch (Baseline Scenario)													
Total Energy Consumption KWh per Month		Monthly IT Energy Consumption in KWh	% IT Power for Servers	% Utilisation	PUE	Avg. Power Consumption of Servers (Watts)	Number of Servers	Servers					
								Avg. Power Rating idle	Avg. Power Rating 100% utilised				
160588.39		101638.22	65	19.8%	1.6	152.8712583	592	96	383				
Global Switch (Calculator)

Reset										Upgrade	98	33	171
Daisy													
Daisy (Baseline Scenario)													
Total Energy Consumption KWh per Month		Monthly IT Energy Consumption in KWh	% IT Power for Servers	% Utilisation	PUE	Avg. Power Consumption of Servers (Watts)	Number of Servers	Servers					
								Avg. Power Rating idle	Avg. Power Rating 100% utilised				

EURECA assessment

What we should expect from the Industry...

Current state of procurement & expectations

- Sampson House lift and shift to ARK completed
- Negotiations completed for EA and Global Switch services used PUE targets and utilisation levels proposed by EURECA as challenge for final tenders...
- Final tender evaluation completed by mid-March
- Award mid-May 2018

Wider context of challenge

- Defra
 - Data and Digital transformation
 - Services not assets – Cloud first/Crown Hosting
 - On-going/planned procurements
 - Frameworks
 - OJEU's
 - STAs
 - All have hosting needs – Trap and Control them!!
- Central (Cab Off, GDS, HMT)
 - Gov ICT Sustainability delivery unit (GDU)
 - Central (Gov CTO Tech Leaders)
 - Technology Code of Practice – HMT spending control

THANK YOU
